India's Growth Trajectory

- The Indian economy has shown resilience in the face of global headwinds, despite elevated inflation and external sector pressures, India remains one of the faster-growing major economies, supported by fundamentals and policy measures.
- India posted one of the highest real GDP growth among key economies in CY23. Structural factors such as favourable demographics, a growing middle class, and increasing urbanization are expected to support India's growth in the medium term. However, the country must address challenges such as income inequality, infrastructure gaps, and low female labour force participation to achieve inclusive and sustainable growth.

India's contribution to world real GDP growth rate stood at 18.5% in 2023, the highest since 1980.

Equity View April 2024 and Outlook

- India's growth story may continue to unfold positively, supported by a confluence of factors. FY24 was a good year for all categories in the market, with mid and small cap doing very well.
- Despite global headwinds like geopolitical tensions and commodity price volatility, the domestic economy has displayed resilience. Several tailwind indicators such as power demand, recovering rural demand, buoyant capital markets, improving corporate capex and external demand, rising industrial output led to a healthy investment climate and may provide a fillip to the economy leading to growth momentum.
- A notable trend in India's growth story is the improvement in capacity utilization, largely driven by cyclical and capital-intensive sectors which in turn suggests that corporates are investing to keep pace with rising demand in the economy.
- While the larger construct looks positive in India, valuations continue to remain elevated at a broad level with some exceptions like Large Banks, select utilities, commodities etc. With elevated valuations and rising bond yields, the equity risk premium tends to reduce.
- Given the election cycle across different countries, we can anticipate some policy shifts which in turn may lead to higher volatility/uncertainty in 2nd half of the year making a case of asset allocation strategies which can aid better risk management.
- Asset allocation in line with investment goals and risk appetite is important for better risk – return optimization. Herein asset allocation funds investing across two or more asset classes can help in lowering volatility and may provide better balance to the overall portfolio mix.
- From a pure equity perspective Large Cap oriented strategies appear better placed in the current context.

*The sectors mentioned above is not a recommendation to buy/sell in the said sectors.

Equity Investment Process for Mutual Funds

Good gets *better*

Process Driven Approach

Risk Rating of Securities
Quantitative Assessment considering Business Risk and Management Risk

Factor Analysis
Risk Optimization tool analyzing key factors and comparing the portfolio & benchmark construct

Fund Casing
Detailed framework for every fund to ensure adherence to its objective

Objective Analyst Output system
Capturing calls of varying levels of conviction

Monitoring & Corrective Actions
Risk monitoring and review

Fund Scorecard
Ongoing performance monitoring to act on early warning signals

'Right Risk Investing' aiming at 'Responsible Alpha'

- **Fundamental Stance**

- Market Valuation distortion/False Narratives/Macro shifts can provide different opportunities i.e. **RIGHT RISK** – without comprising on quality

- **High conviction investments with meaningful stakes**

- Investing in businesses & not just prices and momentum, Growth At Reasonable Pricing Style (GARP).

- **Risk Management without diluting 'Alpha potential'**

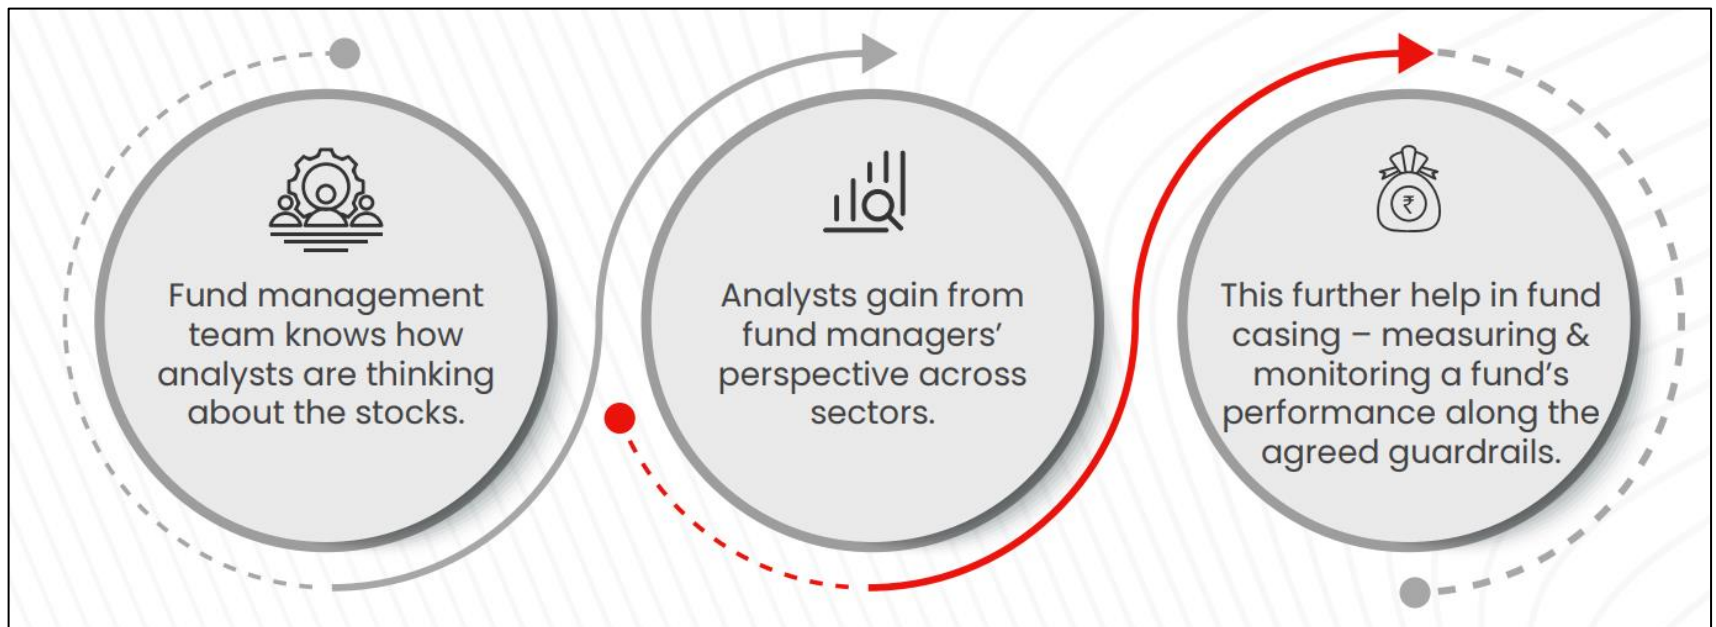

- High Quality Company Selection, driven by strong internal research
- Blending the Process Strength with Market Experience

Investment Philosophy – The Nippon Way

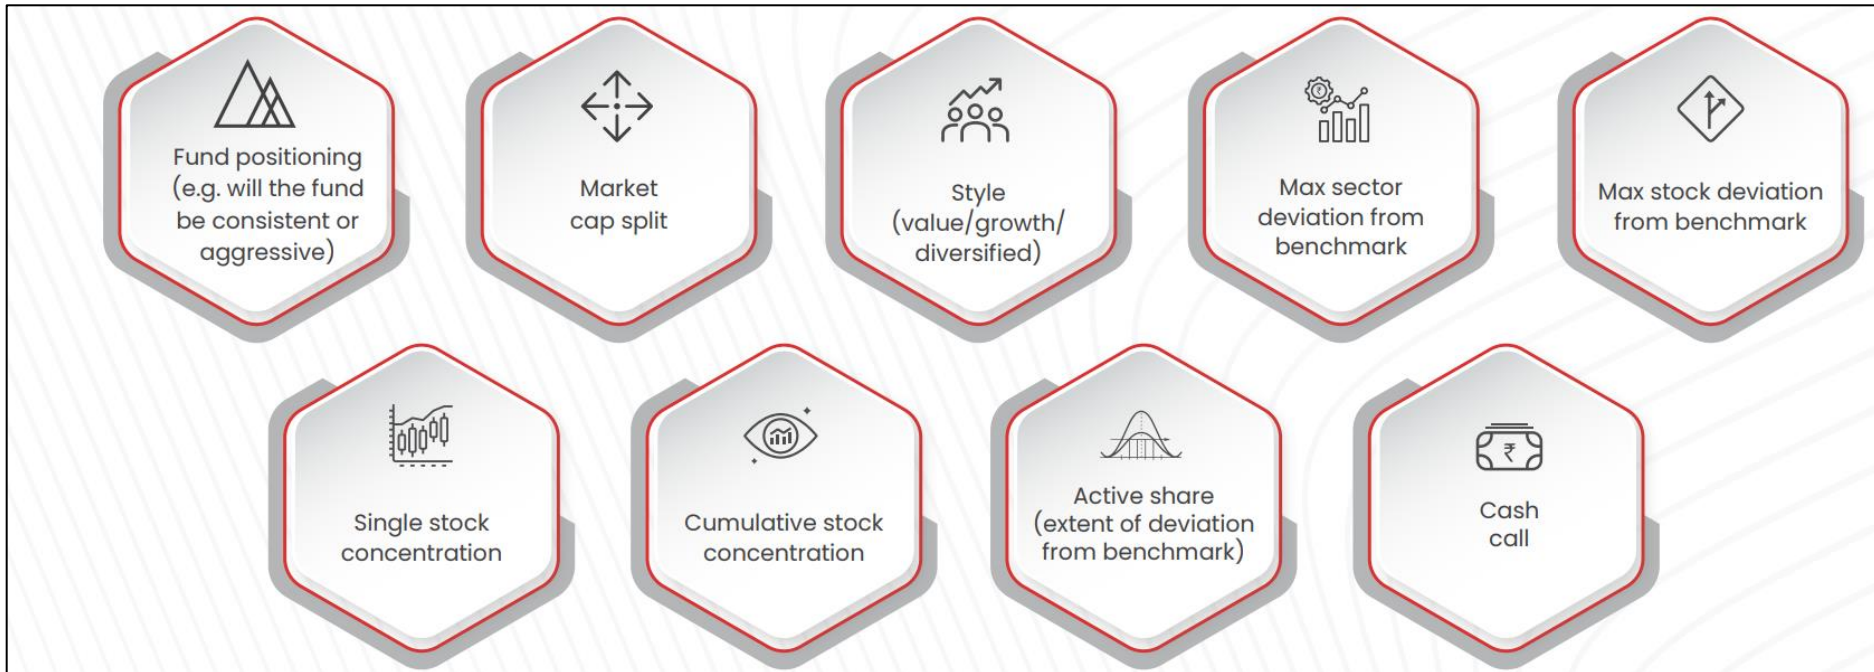

Risk Rating of Securities

Four tiers of risk (A, B, C & D) basis long term business & management assessment. Decided by analysts in consultation with fund managers

Fund Casing Framework

Note: 1) Active share is the percentage of fund holdings that is different from the benchmark holdings. 2) Based on Internal assessment of Business Risk, stocks have been classified under four rating buckets: A,B,C,D with A being the best and D being the worst. While it may appear all the investments should be concentrated in the A or B bucket, the stocks may not be reasonably priced. At the same time, stocks rated C or D may offer opportunities at reasonable valuations.

Nippon India ELSS Tax Saver Fund

Data as on 30th Apr'2024.

Current Positioning and Rationale

- Financials, discretionary consumption and Power utilities remain the most represented sectors in the portfolio.
- Overweight stance on Financials is on account of Overweight on Large lenders, and insurance companies.
- Focus on domestic demand plays remains despite outperformance of many domestic demand-oriented themes in the year 2023, with increase in the spending power, there has been an upscale in the domestic demand.
- Valuations on aggregate basis remains reasonable. Blend of value “and” growth rather than value “or” growth names.
