*Investors should consult their financial advisors if in doubt about whether the product is suitable for them.

Nippon India Arbitrage Fund

Investors understand that their principal will be at Low risk

Nifty 50 Arbitrage Index

Benchmark Riskometer is at Low risk

Investment Objective

The investment objective of the scheme is to generate income by taking advantage of the arbitrage opportunities that potentially exists between cash and derivative market and within the derivative segment along with investments in debt securities & money market instruments.

Investment Philosophy

- ❖ A conservative arbitrage fund that aims to generate income through arbitrage opportunities arising out of pricing mismatch in a security between cash and derivative segment and with derivatives segment along with investments in debt securities and money market instruments.
- ❖ The fund portfolio is completely hedged and takes offsetting positions on various markets simultaneously. The arbitrage fund follows a market neutral strategy and carries no specific equity risk.
- ❖ In the absence of adequate arbitrage opportunities, the scheme may invest in short term debt or money market securities.

Why One Should Invest In Nippon India Arbitrage Fund?

- ❖ Generate income through arbitrage opportunities arising out of pricing mismatch in a security between different markets or as a result of special situations.
- ❖ Completely hedged positions, neutralizes market risk (volatility) and targets absolute returns irrespective of market conditions.
- ❖ Will aim to have prudent balance of safety, returns and liquidity.
- ❖ Nippon India Arbitrage Fund may prove to be an apt product for those investors who want to remain conservative and invest in relatively less risky portfolio.

Fund Manager's View

- ❖ In volatile markets, one can take advantage of arbitrage opportunities, especially when opportunities are available in different sectors and market cap.
- ❖ Since the Indian equity markets are relatively at reasonable valuations, lot of corporate actions like buy back, merger activities etc. may give arbitrage opportunities to capitalize on.
- ❖ India, being one of the most attractive investment destinations for global investors, different time zones of different markets may further give arbitrage advantage.

Corporate Bond	1.83%

Under normal circumstances, the anticipated asset allocation would be:

Equities and equity related instruments, Derivatives including index futures, stock futures, index options, & stock options, etc.# - 65% to 90% (medium to high)

Debt and Money market instruments** (including investments in securitized debt – 10% to 35%(low to medium)

When adequate arbitrage opportunities are not available in the Derivative and Equity markets, the anticipated alternate asset allocation on defensive considerations would be in accordance with the allocation given below: However, in case no arbitrage opportunity is available, then 100% of the remaining investible corpus (to the extent not deployed in arbitrage opportunities in the asset allocation pattern mentioned above) will be deployed in short term debt and money market instruments with tenure not exceeding 91 days (including investments in securitized debt). In this scenario also, the allocation in Equities and equity related instruments, Derivatives including index futures, stock futures, index options, and stock options, etc. will continue to be made in arbitrage opportunities only.

Asset Allocation

Equities and equity related instruments, Derivatives including index futures, stock futures, index options, & stock options, etc. (Only arbitrage opportunities)#.- 0% to 65% (medium to high)

Debt and Money market instruments** (including investments in securitized debt) – 10% to 35% (low to medium)

Short term Debt and Money market instruments not exceeding tenure of 91 days** (including investments in securitized debt)– 0% to 100%(low to medium)

#the exposure to derivatives shown in the above asset allocation tables is exposure taken against the underlying equity investments and should not be considered for calculating the total asset allocation and/or investment restrictions on the issuer. The idea is not to take additional asset allocation with the use of derivative. The margin money deployed on these positions would be included in Money Market category.

** including securitized debt up to 30%

The Scheme shall take derivatives position based on the opportunities available subject to the guidelines issued by SEBI/RBI from time to time and in line with the overall investment objective of the Scheme

Choice of Plans / Options
