Investors understand that their principal will be at High risk

[#]Charges applicable.

Rationale for Dynamic Asset Allocation Funds

Equities, one of the Best Asset Classes for Long Term Wealth Creation

Rs 1 lakh invested in S&P BSE Sensex on Jan 1, 1980 would have grown to Rs 5.0 crs as of September 30, 2021

..... **But Equity returns can be unpredictable and volatile**

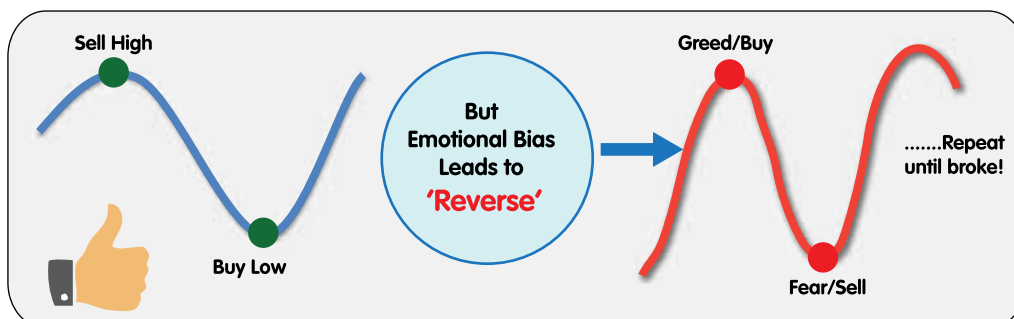

Over the last decade 50% of the calendar years S&P BSE SENSEX delivered less than 10% returns.

Common Source: Bloomberg

This illustration should not be construed as a promise, guarantee or a forecast of any minimum returns and should not in any way be construed to returns of any of Nippon India Mutual Fund Scheme. Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

However, one can make volatility their friend and benefit by:

1. Avoiding Emotional Bias

Resulting in Lower Investor Returns – 'Behaviour GAP' 'As the investor attempts to time the markets'

2. Lowering Downside Risk

If an investment of Rs 100 becomes Rs 50, it's a 50% Decline but for the Rs 50 to become Rs 100 again requires a 100% GAIN

This is only for illustration purpose.

Hence Losing Less is also equally important criteria for Long Term Wealth Creation

3. Aim to gain from growth potential of Equity

Our Solution aims to benefit from equity growth potential with lower volatility through hedging strategies

Presenting Nippon India Balanced Advantage Fund

A model based Dynamic Asset Allocation Fund that aims to offer Triple Benefits of

- 1. Emotion Free Asset Allocation - Model Based Asset Allocation**
- 2. Lowers Downside Risk – Through Hedging**
- 3. Long Term Alpha – through Active Stock selection and Sector**

Asset Allocation Strategy

Asset allocation is based on in-house proprietary model which takes into consideration fundamental, technical and macro parameters.

- **Valuations:** The model uses 1 year forward P/E. Valuations are fulcrum of the model.
- **Trend following/momentum:** This is a unique parameter which aids in maximizing Upside Potential and Limiting downside
- **Trade weighted US Dollar:** A strong Dollar typically coincides with weaker phases of Equity prices, while a weaker Dollar coincides with strong equity performance
- **Global Demand Indicators:** A combination of Lumber/Copper/Nickel prices acts as a strong indicator of global economy and markets.

Fund Strategy:

- Core asset allocation through: Valuations, trend following, trade weighted US Dollar and global demand indicators
- Model based Portfolio rebalancing from time to time basis
- Investment Universe: All listed large and midcap stocks which have derivatives.
- Large cap oriented portfolio
- Well diversified portfolio across stocks and sectors.
- Debt exposure: Debt portfolio will be conservative focused on the shorter end. It will be combination of liquid and short term fixed income securities.

Investment Rationale

- Nippon India Balanced Advantage Fund aims to deliver risk adjusted returns across market cycles
- Model Based Asset Allocation aims to minimize 'Emotional Bias' and helps in implementing 'Buy on Lows & Sell on Highs'
- Active equity stock selection to aid in differential returns
- 'Alpha Potential' in full market cycle through:
 - Downside Risk Management in Falling Markets
 - Upside participation in Rising Markets
