Strategies used through Index based Equity ETFs

- ▶ Liquidity Management ETFs can be used for a given percentage of each asset class to provide a liquidity buffer across the asset allocation
- ▶ Portfolio Completion ETFs allow investors to gain exposure to an asset class that is under-represented in the asset allocation
- ► Cash Equitization ETFs assist in remaining fully invested into equity as per the allocation model, while maintaining liquidity, thus minimizing the cash drag effect on the portfolio
- Portfolio Transitions Since ETFs are passive funds, they may help maintain market exposure while there are changes in sector/stock allocations in a portfolio, hence avoids the risk of missing any market movement
