A Flexi Cap fund can adapt to varied market scenarios by dynamically investing across market caps. Thus, it is a potential One Stop Solution to capture the opportunities across large, mid and small caps

**Flexi Cap Strategy to make the most of Market Opportunities**

**Presenting  
Nippon India Flexi Cap Fund**

**Investment Strategy**

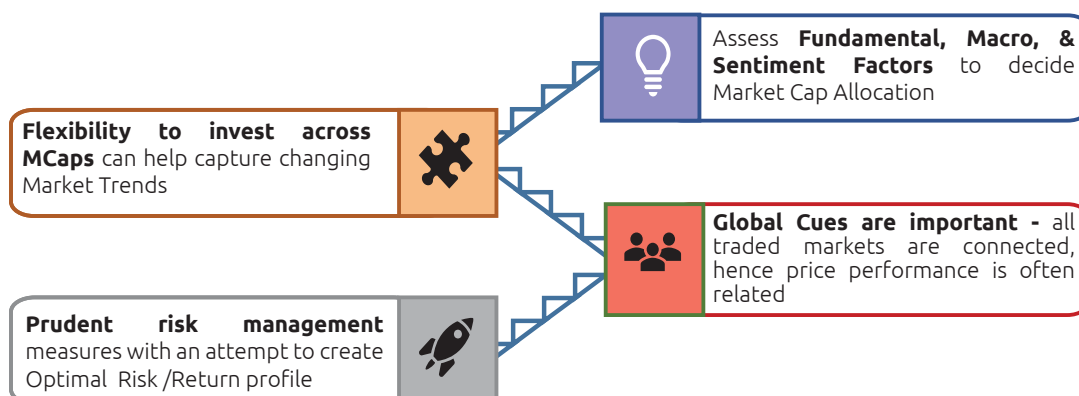

- **Market Cap allocation:** The fund would invest across large, mid and small caps based on market view and relative attractiveness.
- **Growth with Stability:** While the fund will attempt to create Alpha through bottom up stock selection and appropriate allocation to potentially high growth themes, it will maintain reasonable allocations to established leaders.
- Accordingly, for Large caps exposure the deviation will be capped at 50% from the benchmark weight.
- Well diversified portfolio across stock and sectors.
- **Investment approach:**

Lower deviation in Mega Caps

Active Divergence within rest of Large Cap basket

Mid and Small Caps: Focus on Core Growth + New Age Businesses

**Our Strategy to navigate and benefit from Equity Shifts**

## Investment Framework

| Parameter                  | Range   |
|----------------------------|---|
| <b>Market Cap</b>          | Large Cap deviation will be max 50% of Large Cap weight in the Benchmark (Nifty 500 TRI)  |
| <b>Active share</b>        | Active share is the percentage of fund holdings that is different from the benchmark holdings. A fund that has no holdings in common with the benchmark will have an Active Share of 100%, and a fund that has exactly the same holdings as the benchmark considered will have an Active Share of 0%. The fund would have an active share of 50 - 70%   |
| <b>Stock deviation</b>     | Top 5 stocks by weight in the Benchmark - for each stock max deviation of 40%   |
| <b>Stock Concentration</b> | "Based on Internal assessment of Business Risk, stocks have been classified under four rating buckets: A,B,C,D with A being the best and D being the worst. While it may appear all the investments should be concentrated in the A or B bucket, the stocks may not be reasonably priced. At the same time, stocks rated C or D may offer opportunities at reasonable valuations. Cumulative exposure: Max 45% in C, Max 5% in D" |
| <b>Sector deviation</b>    | Max deviation of financials - 8%  |

## Current Focus Themes

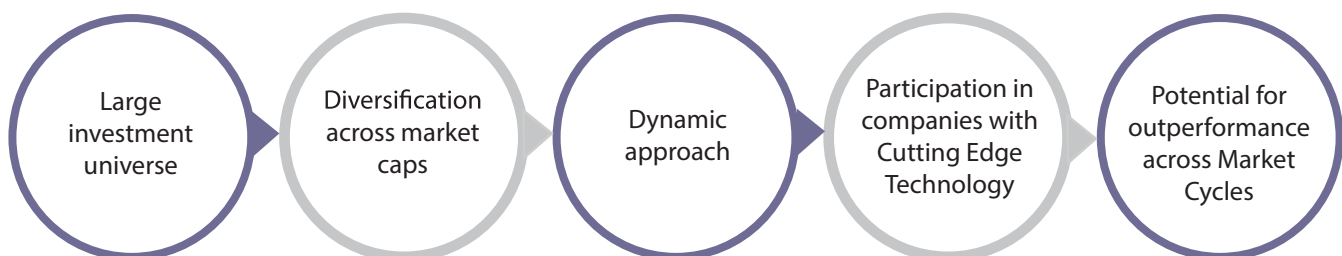

**Note:** The sectors mentioned are not a recommendation to buy/sell in the said sectors. The scheme may or may not have future position in the said sectors.
