Benchmark Riskometer is at Moderate risk

Nippon India Floating Rate Fund

About Nippon India Floating Rate Fund

An open ended short tenor income fund which aims to offer investors a combination of accrual & duration by capturing opportunities at short to medium end of the yield curve.

Current Investment Strategy

- The Fund would invest predominantly in securities issued by Public Financial Institutions/ HFC/ NBFC/ Private Sector Corporate & in Government Securities
- Rating Profile: Portfolio intends to invest in AAA rated/ equivalent securities
- The Securities are held till maturity and the portfolio would roll down in terms of maturity over a period of time

Note: Above mentioned current investment strategy is based on the prevailing market conditions and is subject to change within the limits of the SID basis the fund manager's view.

Suitability

- It is ideal for investors who want to add duration to their portfolios but with limited risk appetite and an investment Horizon of 1 - 2 years. The open ended nature of the fund though provides an exit option in case the investor wants to move out earlier.
- The portfolio strategy on the other hand provides a flavor of capturing the rates at current levels and roll down in portfolio duration
- We expect that this portfolio construct, along with a reasonably passive investment strategy offers a viable proposition for adding duration to the portfolio, while at the same time reducing the volatility in returns over the medium term

Inception Date

• 27th Aug, 2004

Fund Manager#

• Anju Chhajjer
