Nippon Life India Asset Management Limited (NAM India) is one of the largest asset managers with more than 28 years of experience in managing wealth of investors with a robust distribution network in India.

## Why Index Fund?

- ▶ **Less of Ambiguity:** The Index funds investment strategy & stock selection is clearly defined, holding stocks as per the underlying Index in the same weightages (subject to expense ratio & tracking error).
- ▶ **Diversification** – Buying a single unit offers diversification benefit in the entire index companies.
- ▶ **Low Cost** – Generally less expensive than investing in multiple individual securities/active equity fund. (Low cost with respect to Total Expense Ratio)

## Strategies used through Index based Equity Index Funds

- ▶ **Liquidity Management** – Index funds can be used for a given percentage of each asset class to provide a liquidity buffer across the asset allocation.
- ▶ **Portfolio Completion** – Index funds allow investors to gain exposure to an asset class that is under-represented in the asset allocation.
- ▶ **Cash Equitization** – Index funds assist in remaining fully invested into equity as per the allocation model, while maintaining liquidity, thus minimizing the cash drag effect on the portfolio.
- ▶ **Portfolio Transitions** – Since index funds are passive funds, they may help maintain market exposure while there are changes in sector/stock allocations in a portfolio, hence avoids the risk of missing any market movement.

## Nippon India Index Fund – BSE Sensex Plan

### Investment Objective : Nippon India Index Fund – BSE Sensex Plan

The primary investment objective of the scheme is to replicate the composition of the BSE Sensex, with a view to generate returns that are commensurate with the performance of the BSE Sensex, subject to tracking errors.

### Why Invest in Nippon India Index Fund – BSE Sensex Plan

- **Exposure:** Allows investors to take part in India's growth story by essentially investing and gaining exposure to one of the oldest and one of the most prominent benchmark in India
- **Reduce Risk** – Elimination of non-systematic risks like stock picking and portfolio manager selection, via investing in the BSE Sensex index.
- **Diversification:** Buying a single unit will offer diversification benefit in the entire index companies.
- **Opportunity** – Will allow non demat account holders to seek exposure to the 30 most liquid stocks from the large cap segment of the market via investing in Nippon India Index Fund – BSE Sensex Plan.
- **SIP investments** – Investors can avail the benefit of Systematic Investment Plan (SIP).

## About BSE Sensex Index

### Eligible Universe:

The index is derived from the constituents of the BSE 100. The inclusion of DVRs in the index will result in more than 30 stocks in the index. However, the number of companies in the index remains fixed at 30. Stocks in the eligible universe must satisfy the following eligibility factors in order to be considered for index inclusion:

- **Listing History:** Stocks must have a listing history of at least six months at BSE.
- **Trading Days:** The stock must have traded on every trading day at BSE during the six month reference period.
- **Multiple Share Classes:** DVRs satisfying the above eligibility criteria are aggregated with the company's common stock and index construction is done based on the aggregated company data as detailed below.

### Index Construction:

1. All companies meeting the eligibility factors are ranked based on their average six month float adjusted market capitalization. The top 75 are identified.
2. All companies meeting the eligibility factors are ranked again based on their average six month total market capitalization. The top 75 are identified.
3. All companies identified based on steps 1 and 2 are then combined and sorted based on their annualized traded value. Companies with a cumulative annualized traded value greater than 98% are excluded.
4. The remaining companies are then sorted by average six-month float-adjusted market capitalization. Companies with a weight of less than 0.5% are excluded.
5. The remaining companies from step 4 are then ranked based on their average six-month float adjusted market capitalization, and are selected for index inclusion according to the following rules:
  - a) The top 21 companies (whether a current index constituent or not) are selected for index inclusion with no sector consideration.
  - b) Existing constituents ranked 22 – 39 are selected in order of highest rank until the target constituent count of 30 is reached.
  - c) If after this step the target constituent count is not achieved, then non-constituents ranked 22 – 30 are selected by giving preference to those companies whose common India Industry Classification Structure macro-economic indicator is underrepresented in the index as compared to the macro-economic indicator representation in the BSE AllCap.

- d) If after this step, the target constituent count is still not achieved, non-constituents are selected in order of highest rank until the target constituent count is reached.

Annualized traded value is calculated by taking the median of the monthly medians of the daily traded values over the six-month period. The annualization is calculated using 250 trading days in a year.

All additions and deletions are made at the discretion of index committee.

Constituent Weightings: Index constituents are weighted based on their float-adjusted market capitalization.

**Source: BSE**

**Note:** The performance of the scheme shall be benchmarked to the Total Return (TRI) variant of the Index chosen as a benchmark.
