Nippon Life India Asset Management Limited (NAM India) is one of the largest asset managers with more than 28 years of experience in managing wealth of investors with a robust distribution network in India.

Why Index Fund?

- ▶ **Less of Ambiguity:** The Index funds investment strategy & stock selection is clearly defined, holding stocks as per the underlying Index in the same weightages (subject to expense ratio & tracking error).
- ▶ **Diversification** – Buying a single unit offers diversification benefit in the entire index companies.
- ▶ **Low Cost** – Generally less expensive than investing in multiple individual securities/active equity fund. (Low cost with respect to Total Expense Ratio)

Strategies used through Index based Equity Index Funds

- ▶ **Liquidity Management** – Index funds can be used for a given percentage of each asset class to provide a liquidity buffer across the asset allocation.
- ▶ **Portfolio Completion** – Index funds allow investors to gain exposure to an asset class that is under-represented in the asset allocation.
- ▶ **Cash Equitization** – Index funds assist in remaining fully invested into equity as per the allocation model, while maintaining liquidity, thus minimizing the cash drag effect on the portfolio.
- ▶ **Portfolio Transitions** – Since index funds are passive funds, they may help maintain market exposure while there are changes in sector/stock allocations in a portfolio, hence avoids the risk of missing any market movement.

Nippon India Index Fund – Nifty 50 Plan
