Strategies used through Index based Equity ETFs

- ▶ **Liquidity Management** - ETFs can be used for a given percentage of each asset class to provide a liquidity buffer across the asset allocation.
- ▶ **Portfolio Completion** - ETFs allow investors to gain exposure to an asset class that is under-represented in the asset allocation.
- ▶ **Cash Equitization** – ETFs assist in remaining fully invested into equity as per the allocation model, while maintaining liquidity, thus minimizing the cash drag effect on the portfolio.
- ▶ **Portfolio Transitions** – Since ETFs are passive funds, they may help to maintain market exposure while there are changes in sector/stock allocations in a portfolio, hence avoids the risk of missing any market movement.
